Introduction

The Lantmännen Research Foundation Handbook contains useful information for both researchers and assessors. Please read through the Handbook before starting your work. **The Handbook is available in both Swedish and English.**

Through the Lantmännen Research Foundation, Lantmännen has a long tradition of collaborating with researchers at colleges, universities and research institutes, both nationally and internationally. The purpose of the Foundation's initiatives is to give rise to new ideas, information and insight, that bring enhanced value to the entire value chain from field to fork.

The Lantmännen Research Foundation is currently working within three focus areas: **Agriculture and machinery, Bioenergy and green materials, and Food and health.** These focus areas are based on the Foundation's current priorities and indicate the desired research direction. The priorities are described in more detail in the call texts which are updated annually.

The Foundation's board is responsible for operations, and they have three review panels to assist them, one for each focus area. To ensure the scientific quality and that granted projects are relevant, both the board and the review panels are composed of farmers, external researchers, and officials from Lantmännen.

Foundation year

Application periods

An open call is carried out once a year. This year, 2025, applications can be submitted from June 26 until September 30. Applications are evaluated during October and decisions are announced in early December. In the spring, a smaller call is carried out which is only open to applicants after agreement with the Foundation's office. In this case, the opportunity can be given to submit a supplementary application in an ongoing project or additions to applications that have been revised after previous rejections.

Progress and final reporting

For all projects, a written progress report must be submitted at least once a year and a written final report submitted when the project has been completed. The reports should preferably be submitted in connection with the spring or autumn calls, that is, twice a year, unless otherwise agreed. An approved report is usually a requirement for payment of granted funds.

Foundation Day

Every year, a Foundation Day is held based on different themes where current Foundation projects are presented and discussed.

Funds to apply for

The Lantmännen Research Foundation annually awards projects with a total budget of 25 million SEK. How the funds are to be distributed between different focus areas is not pre-determined. The quality and relevance of the applications determines which projects are

granted for each individual call. The length of the granted projects varies, from a few months up to two years or more. There is no maximum budget for a project. A guideline is that the Foundation's annual budget is usually distributed among approximately 20 projects.

Funds can be applied for projects that are fully financed by the Lantmännen Research Foundation or that are co-financed by another financier. The amount applied for must include any statutory value added tax (VAT). New for 2025 is that you can apply for financing of the entire overhead cost. The overhead cost must be stated in SEK, and in free text also be presented as a percentage (%) of the total salary cost, i.e. the total salary cost including social security contributions. A description of what is included in the overhead cost should also be included. Granted funds are paid in Swedish kronor (SEK). The foundation can, in some cases, grant funds where a scholarship is paid instead of a salary, in this case special conditions apply. Please contact the Foundation's office for information on the terms and conditions.

Lantmännen often receives requests for participation in applications that are to be submitted to other financiers. If the project is deemed interesting, the project manager may be asked to send in an application to the Research Foundation regarding possible co-financing.

Writing an application

Start by reading the call text to get a picture of which topics are prioritised. The application is then created in the foundation portal, where reporting of ongoing and completed projects is also made. In the foundation portal there is more information about what should be included in the application. The application can be written in Swedish or English.

In connection with the open call 2024 a new foundation portal was launched. This means that everyone who uses the system must create a new user profile on the first login. The new foundation portal is different from the previous version and as a user, you will come across several new functions. We also have a new support function that can be accessed via: support@researchweb.org. The support is open from Monday to Friday at 08:00-1700.

The project plan, which is made directly in the portal, should be a maximum of 10 pages long (approx. 45,000 characters) and divided into the following headings:

1. Popular scientific summary
2. Background
3. Purpose, objectives, and effects
4. Materials and methods
5. Preliminary results
6. Timetable and deliveries
7. Dissemination plan, including handling of patents and IPR
8. Project management team
9. References

All applications are evaluated based on practical benefits, scientific quality and commercial potential. Please make use of the assessment criteria when you create your application. They are updated every year before the application round opens.

We are open to have a dialogue about the application before it is sent in.

Assessment criteria

1. *Scientific quality*
 - Does the application contain a current description of the background and state of knowledge?
 - Are hypotheses and goals well described?
 - Is the issue scientifically described?
2. *Proposed materials and methods*
 - Are the selected materials and methods validated and relevant to the research questions?
 - Are the proposed materials and methods available within reasonable time?
 - Is the material or method unique in any way?
 - Are there any ethical or environmental risks associated with the project?
3. *Applicant's or group's scientific expertise*
 - Is there an updated CV attached?
 - Does the project group have the required expertise?
 - Has the group previously been published within the field?
4. *Costs*
 - Is the entire cost of the project accounted for?
 - Are the costs clearly accounted for in the different parts of the project?
 - Are the costs and other efforts reasonable?
 - Can something be done differently in order to reduce project costs?
 - Has funding been granted or applied for from other financiers?
 - Can the project be conducted without the participation of the Foundation?
5. *Time plan*
 - Is there a clear time plan?
 - Is the time plan linked to activities and deliverables?
6. *Relevance*
 - Is the project's relevance, economic potential and time to market for primary production and/or industry and trade well described?
 - Has the applicant described the impact the project can have in the area?
 - Can the described deliveries be commercialized instantly or is further action required?
 - Can the project lead to a patent or other form of intellectual property with commercial significance?
 - Has the sustainability aspects been considered?
7. *Plan for the reporting of results*
 - Is there a plan describing how results will be spread?
 - Is there a plan for handling patents and other intellectual property?
 - Is there a plan for reporting results linked to deliveries?
 - Is there a plan for scientific publishing?
 - Is there a project management group with representation from the Foundation (mandatory in all the Foundation's projects)?

Follow-up of projects

Project contract

When a project is awarded funds, a grant contract is signed between the relevant parties. The contract includes a reporting and payment plan as well as a number of general sections related to, for example, publication and intellectual property.

Project management group

All projects must have a project management group with representation from all contractual parties. The purpose of the group is to continuously support the project and identify any commercial opportunities or new ideas that may require additional commitment. The frequency of meetings is decided on and planned in relation to the start of the project.

Progress and final reporting

For all projects, a written progress report must be submitted at least once a year and a written final report submitted when the project has been completed. The reporting is linked to the payment of project funds where approved reports are a requirement for payment. The reports must be structured as scientific articles and be both readable and understandable by a person who is not linked to the project.

The following structure and headings should be used for progress reporting

1. Summary
2. Introduction: background, goals for the project, hypothesis
3. Materials and methods
4. Results
5. Discussion: achieved results thus far in relation to set goals and next step
6. Publications, presentations, posters and essays
7. Project management group, composition and activities
8. Financial reporting. Construct a table in which accumulated costs are reported in relation to the granted budget. Use the same headings as in the budget in your application (salary costs, materials, etc.).
9. Deviations in the project

The following structure and headings should be used for final reporting

1. Summary (max. 500 words should also be entered directly into the application system)
2. Introduction: background, goals for the project, hypothesis
3. Materials and methods
4. Results
5. Discussion: relate to set goals and hypotheses, ability to protect results, thoughts on how the results can be used by Lantmännen, farmers and others
6. Conclusion of the most important results
7. Publications, presentations, posters and essays, all information material that is generated in the project must be reported
8. Project management group, composition and activities
9. Financial reporting. Construct a table in which accumulated costs are reported in relation to the granted budget. Use the same headings as in the budget in your application (salary costs, materials, etc.).
10. Deviations in the project

Payment of grants – new address

When a project is awarded funding by the Lantmännen Research Foundation (company no. 814000-7397), a grant contract is signed in which a payment plan is included. Provided that the conditions of the grant contract are met, payment is made after a written requisition has been submitted. The requisition must be sent to the address below and contain information about: *project number, project title, project manager, information about where the funds are to be deposited, counterfoil text, amount and grant recipient's address and company number.*

Lantmännens Forskningsstiftelse (important to use the Swedish name)
c/o PRI Pensions- och Stiftelsetjänst
Box 5147
402 23 Göteborg
SWEDEN

The requisition can be emailed directly for scanning to: inbox.lev.1695244@arkivplats.se

Please contact Helena Fredriksson if you have any questions about payments,
helena.fredriksson@lantmannen.com

Contact information

Helena Fredriksson is responsible for the Foundation ´s operational activities together with the review panel’s secretaries, Pär-Johan Lööf, Sophia Wassen and Annelie Moldin.
